# 850 Purchase Order

# Functional Group ID= ${\bf PO}$

#### **Introduction:**

This X12 Transaction Set contains the format and establishes the data contents of the Purchase Order Transaction Set (850) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide for customary and established business and industry practice relative to the placement of purchase orders for goods and services. This transaction set should not be used to convey purchase order changes or purchase order acknowledgment information.

#### **Notes:**

This document defines the AAFES Business Requirements for the Purchase Order (REV 1).

- 1. All segments marked "Mandatory" and all elements preceded with an "M" are mandatory by the X-12 standards.
- 2. All segments marked "Optional (Recommended)" and all elements preceded with an "R" are required by AAFES and must always be transmitted.
- 3. All unmarked segments and elements may be transmitted as necessary, according to the user's need.
- 4. AAFES comments relating to segments and elements are noted in italic text with a shaded background.

#### **Transaction Set Notes**

- **1.** If segment LIN is used, do not use LIN01.
- **2.** PO102 is required.
- 3. The SCH segment is used to specify various quantities of items ordered that are to be scheduled. When this segment is used the unit of measurement code (SCH02) should always be identical to the unit of measurement code in the associated PO1 segment (PO103) and the sum of values of quantity (SCH01) should always equal the quantity ordered (PO102) in the PO1 segment.
- 4. The number of line items (CTT01) is the accumulation of the number of PO1 segments. If used, hash total (CTT02) is the sum of the value of quantities ordered (PO102) for each PO1 segment.
- **5.** If AMT is used in the summary area, then AMT01 will = TT and AMT02 will indicate total transaction amount as calculated by the sender.

Segment: **ST** Transaction Set Header

Position: 0100

Loop:

Level: Heading Usage: Mandatory

Max Use: 1

Purpose: Syntax Notes:

**Semantic Notes:** 

To indicate the start of a transaction set and to assign a control number

- 1 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).
- 2 The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition. When used, this implementation convention reference takes precedence over the implementation reference specified in the GS08.
